

Eligo – a kitchen sink for real needs

intra
SCANDINAVIAN DESIGN

A COMPANY OF THE **teka**-GROUP

This is Eligo

A kitchen sink for real needs

For many, the kitchen sink has become a choice between form and function. And perhaps above all an uninteresting choice.

Eligo is something else: a sink that is designed for real needs and kitchens, and that makes the category more interesting. The award-winning design is an addition to the kitchen's interior, with its mix of soft and hard lines, discrete touch buttons and changing shapes. Features and accessories are not always noted at first sight, but mean that the kitchen sink can be changed, adapted and used in a variety of ways.

It is simply designed to fit into your personal kitchen. Learn more about Eligo, about the design and features.

Innovative features

Innovation from a long tradition of craftsmanship

The goal of our development process was to create a new concept for kitchen sinks, with brand new functions and features. The result is Eligo – which is designed based on the idea of flexibility, with type of kitchen as well as situation of use in mind, and with a range of intelligent features and innovations.

Eligo is inspired by a long Scandinavian industrial tradition and from a craftsmanship that has made Intra successful. It is also one of the reasons why it has received an innovation award from the German Design Council. Eligo is produced in Sweden, in our factory in the village of Mölnatorp.

The functions

The smart drain grate is operated with the touch buttons, and can be used as scraper. The scraper is protected by a thin layer of silicone that also makes it more efficient. Discrete touch buttons control the functions and makes it easy to keep clean. Smart dishwasher valve with automatic function is optional. LED lighting at the overflow indicates that it is open.

Flexible wall that creates two bowls if needed. The wall is watertight and can be placed anywhere in the bowl, or removed.

The smart drain grate opens easily with the touch buttons.

A foldable chopping board, with edges protected by a soft material. Changes the size of the working area or covers the bowl. ▶

Rinsing basket that can be placed anywhere in the kitchen sink. Protected by a soft material which holds it in place. The cutlery basket fits perfectly in the rinsing basket. ▼

Design and styles

Award Winning Design

Eligo was rewarded immediately with an innovation award from the German Design Council.

Discrete and classical form

Soft and hard, discrete and sober, changeable and intelligent. Eligo is designed to fit into a variety of kitchens, almost regardless of interior style.

The many features are discretely hidden in the touch buttons, and the accessories are a natural part of the context. With your choice of tap, you personalize the kitchen. You can also choose the stylish Eligo tap, with or without touch-free function.

Eligo has larger, but not deeper bowls, making it easier to rinse large saucepans. The conical edges and smooth lines makes it easy to clean.

Models

Four models

Eligo is available in four different models with a universal flange which allows it to be used for both inset, under- and flush mount. The kitchen sinks can also be delivered as a variant including all accessories.

If you want to know more about Eligo or place an order, contact your local retailer or visit intraeligo.com.
